Vape 'em if you Got 'em Advantages of Vaping Smokers know that traditional smoking is harmful to their health. Yet, for some people, it is a relaxing or social experience that they are not ready to give up. Beyond addiction to nicotine, there are rituals many smokers enjoy that delay their quest to seek ways in which to stop. Modern technology has a way of catching up and making our lives just a little easier. Possibly one of the greatest new discoveries is that of the Vapor E-Cigarette. The E-Cigarette is basically a device that looks like a cigarette, delivers "vapor" and satisfies the nicotine craving, and allows the smoker to enjoy the ultimate smoking experience. If the smoker is still "smoking," how can there be advantages? The smoke emitted from the E-Cigarette is not really smoke but just a vapor. It lasts just long enough to give the appearance of being smoke but then quickly disappears into thin air. There is no hovering cloud of smoke or secondhand smoke. Since there is no smoke, the smell does not saturate your clothing, hair, car, home, office, or any other surroundings like real smoke. No secondhand smoke makes the use of The E-Cigarette smoking devices safer around family, friends, coworkers, and the public in general. The lack of saturating or offensive odors and dangerous emissions makes The E-Cigarette sociably acceptable. And while the e-cigarette has not been proven to be an official smoking-cessation device, it does indeed provide a healthier alternative to smoking without the side effects caused by the patch and/or medicines. A smoker can cut their smoking costs in half and

reduce the risks of tobacco smoking, including lung cancer, by avoiding those 4000 toxins and carcinogens found in regular cigarettes. If you are questioned about your e-cigarette while you are using it in non-smoking areas as well as in smoking areas, simply explain what it is, how it operates by battery, and that it emits vapor or steam and contains no tobacco. With that explanation, your feedback will usually be positive, receiving nods of approval and looks of fascination over "The Electronic Cigarette concept". Happy Vaping!
